

FORESSO

Net Zero Policy

Introduction

Sustainability and circularity in manufacturing are among the biggest challenges facing the planet today. It is not just important but essential that all manufacturing moves towards Net Zero as quickly as possible.

This must be attained not only through reduction of waste and carbon footprint but also through sensible and attainable goals in all aspects of business.

We aim to be thought leaders for SMEs in the UK and we actively engage with local authorities, business groups, and media to help guide others towards better practices.

Policy Goals

Policy	Target	Current Status
100% renewable energy.	Q4 2020	Complete.
Eliminate plastic packaging for domestic orders.	Q4 2020	Complete.
Waste Negative.	2023	50% by weight. Eg. for every 1000kg of waste produced, 500kg is consumed.
Elimination of petroleum products and petroleum derived products in all aspects of production.	2025	R&D in progress with support of InnovateUK.
0% waste to landfill.	2023	5% waste to landfill.
Carbon Neutral factory and offices.	2025	Ongoing.
Onsite renewable energy generation.	2025	Ongoing.
